DEFENSE TECHNOLOGIES INTERNATIONAL CORP. (DTII)

Launches its Marketing Campaign to Synagogues, Churches and Private Schools

Del Mar, California (May 19, 2020) – Defense Technologies International Corp. (OTC: DTII) (the Company) and Passive Security Scan Inc. (the Subsidiary); innovative providers of security technology and systems with broad and diverse applications, is pleased to update on ongoing progress.

DTII's Subsidiary through the services of Privateer Marketing Force and Cornerstone Communications launches its Marketing Campaign to Synagogues, Churches and Private Schools.

* * *

The Campaign Document:

Passive Security Scan is pleased to announce it is offering three new Passive Portal options which will allow for screening of people entering a building for weapons, weapons AND elevated body temperature or just simply for elevated body temperature. The company's mission is focused on "**Keeping Guns and Contagions Outside the premises**" to help keep your school, church, office, restaurant and other public venues free from potential harm.

The three product versions include:

PASSIVE PORTAL 1 – Screens for Weapons only;

PASSIVE PORTAL 2 – Screens for Weapons and elevated body temperature;

PASSIVE PORTAL 3 – Screens for elevated body temperature only.

"Our **Passive Portal**[™] systems were designed long before the need for temperature control was in place," said Merrill Moses, CEO. "The challenges facing today's institutions are growing and ever expanding. We are thrilled to be able to offer the only safe, radiation-free solution available on the market today. There are enough risks we face on a daily basis and we believe that reducing the radiation we come into contact with AND potential contagions... is a preventative measure we can all afford to embrace."

The company continues to improve their patented Passive Portal system, a system that does not use any electromagnetic radiation of any kind, including x-rays, microwaves and or radio waves to detect weapons. The Passive Portal non-invasively and passively *detects weapons readings via subtle changes in the Earth's magnetic field*. Unlike active systems used in airports and court houses, our passively detecting weapons system limits exposure to students, faculty, and employees who daily pass through weapons detection systems multiple times each and every day, which could equate to 180 (days) x 400 (visits) + exposures per school year for each student.

The new Passive Portal 2 and 3 *passively* detect persons with *Elevated Body Temperature* and alerts the operator of this condition as patrons are scanned for weapons... Doing so will aid facilities using our "Passive Portal" in also preventing the spread of contagions from entering the facility. The Passive Portal 2 and 3 use only *US Food and Drug Administration 510k listed sensors* to perform this Elevated Body Temperature detection to ensure that the product is safe and effective in its use. The Passive Portal 2 and 3 also ensure public privacy is protected, as no medical data is saved during operation.

Thermal cameras have a long history of being used in public spaces such as airports, train terminals, businesses, factories, and concerts as an effective tool to measure skin surface temperature and identify individuals with Elevated Body Temperature. Using thermal cameras, monitors can be more discrete, efficient, and effective in identifying individuals that need further screening with virus-specific tests.

On January 27, 2020, President Trump signed H.R.2476, the Securing American Nonprofit Organizations Against Terrorism Act of 2019 into law (Public Law 116–108). The bipartisan sponsored law establishes in the Department of Homeland Security a Nonprofit Security Grant Program, under which the Federal Emergency Management Agency (FEMA) shall make grants to eligible nonprofit organizations (tax-exempt organizations and those determined to be at risk of a terrorist attack) for target hardening and other security enhancements to protect against terrorist attacks. The law makes available **\$75 million dollars** for each of the fiscal years 2020 through 2024 for 501(c)(3) religious, charitable, scientific, literary, and educational organizations and allows them to purchase physical security enhancement equipment and personnel screening systems with this grant money.

This niche of 501(c)(3) organizations can be easily filled by Passive Portals. In addition, Passive Portal 2 and 3 can be deployed at restaurants, retail stores, health clubs, hotels, hospitals, nursing homes, colleges and universities, coffee shops, movie theaters, and many, many more.
